

## EPSDT Quick Reference Guide

---

### **Periodicity Schedule:**

There are nine visits in the first two years of life: 1 month, 2 months, 4 months, 6 months, 9 months, 12 months, 15 months, 18 months, and 2 years. Children 3 years and older receive one periodic screening per year.

### **Periodic Screenings:**

Periodic screenings are well child checkups performed according to the AAP periodicity schedule. If you are seeing the child for the very first time it is an initial (new patient) EPSDT screening regardless of age. These visits do not count against the annual office visit limit.

### **New Patient Periodic Screening Codes:**

99381-EP (under 1 year of age)  
 99382-EP (1-4 years of age)  
 99383-EP (5-11 years of age)  
 99384-EP (12-17 years of age)  
 99385-EP (18-20 years of age)

### **Established Patient Periodic Screening Codes:**

99391-EP (under 1 year of age)  
 99392-EP (1-4 years of age)  
 99393-EP (5-11 years of age)  
 99394-EP (12-17 years of age)  
 99395-EP (18-20 years of age)

### **Interperiodic Screening:**

The purpose of an inter-periodic screening is to identify new problems between screenings. The codes WILL NOT count against the recipient's benefit limits if billed with an EP modifier. Each child's primary insurance must be billed first, and then Medicaid as the payer of last resort.

### **Interperiodic Screening Codes:**

<p>99211-EP          99212-EP          99213-EP          99214-EP          99215-EP</p>	}	Office and/or outpatient setting
