

Did you know ...?

Health Home (HH)

Health Home (HH) - program integrates and coordinates care for patients with certain chronic conditions to achieve improved health outcomes in all 67 Alabama counties.

- Health Home adds additional support to Patient 1st Primary Medical Providers (PMPs) by intensively coordinating care of patients who have or are at risk of having certain **chronic conditions** including: asthma, diabetes, cancer, COPD, HIV, mental health conditions, substance use disorders, transplants, sickle cell disease, BMI over 25, heart disease, and Hepatitis C.
- Care management, or coordinated care in the **HH** program is done by connecting patients with needed resources, teaching self-management skills, providing transitional care, and bridging medical and behavioral health services, among other services.
- In order for patients to receive Health Home services, their assigned Primary Medical Provider (PMP) must be contracted with a Health Home in their region. Once a contract has been signed, the PMP should contact their Health Home to ensure their patients are receiving these services.
