Risk Factors

Listed below are risk factors that may indicate the need for Family Planning Case Management services. Each EI should be assessed in a face to face encounter.

	YES	NO	Risk Factors
1.			EI is awaiting sterilization procedure (tubal ligation or vasectomy).
2.			EI is a first-time birth control user and is having complications with the chosen method.
3.			EI has a history of multiple unplanned pregnancies.
4.			EI has a history of abortions.
5.			EI has language/communication barriers that interfere with the EI's ability to understand and/or implement family planning methods.
6.			EI has a history of noncompliance with the chosen family planning contraceptive methods (consecutive months of missed refills of contraceptives, etc.).
7.			Domestic violence in the home or environment may interfere with EI's adherence to birth control method.
8.			EI has a history of mental health problems requiring additional assistance for adherence to birth control method.
9.			EI history of substance abuse that may interfere with adherence to birth control method.
10.			EI has Impaired cognitive functioning requiring additional assistance for adherence to birth control method.
11.			EI requests assistance with smoking cessation.
12.			EI needs assistance with establishing Medicaid eligibility.
13.			EI is using a new birth control method due to change in prescription for family planning contraceptives in the last three (3) months.
14.			EI has a history of missed appointments and needs frequent appointment reminders.
