

AMA Interfaces List

Type	Name	Description
Business Service	Centralized Services	Represents centralized services that are part of the comprehensive System Integration Solution provided by the SI Contractor including Identity Management, MES Portal, Centralized Service Desk Management Tool, Centralized Change Management System, and Managed File Transfer Service.
Data Exchange	AMMIS - EDS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	CARES - AMMIS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	CARES - CPMS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	CARES - SI Interface	Represents data exchange from the module to the SI Contractor in support of Centralized Services.
Data Exchange	CPMS - EDS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	CPMS - SI Interface	Represents data exchange from the module to the SI Contractor in support of Centralized Services.
Data Exchange	Data Governance Rules Interface	Represents data exchange from the Agency's Data Governance Tool to the SI Contractor to provide data governance policies and business rules for use by the SI Contractor.
Data Exchange	EDS - SI Interface	Represents data exchange from the module to the SI Contractor in support of Centralized Services.
Data Exchange	MEVV - AMMIS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	MEVV - CPMS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	MEVV - SI Interface	Represents data exchange from the module to the SI Contractor in support of Centralized Services.
Data Exchange	PM - CPMS Interface	Represents data exchange from system to system (module to module) utilizing the System Integration Platform technology service to support the integration.
Data Exchange	PM - SI Interface	Represents data exchange from the module to the SI Contractor in support of Centralized Services.
Data Exchange	SI - CARES Interface	Represents data exchange from the SI Contractor to the module in support of Centralized Services.
Data Exchange	SI - CPMS Interface	Represents data exchange from the SI Contractor to the module in support of Centralized Services.
Data Exchange	SI - EDS Interface	Represents data exchange from the SI Contractor to the module in support of Centralized Services.
Data Exchange	SI - MEVV Interface	Represents data exchange from the SI Contractor to the module in support of Centralized Services.
Data Exchange	SI - PM Interface	Represents data exchange from the SI Contractor to the module in support of Centralized Services.

Type	Name	Description
System	Alabama Medicaid Management Information System	Alabama Medicaid Management Information System (AMMIS) is a monolithic system provided by Gainwell that serves as the core system supporting the Alabama Medicaid Agency.
System	Centralized Alabama Recipient Eligibility System	Centralized Alabama Recipient Eligibility System (CARES) is currently in a production state, and is targeted to also take over functions currently provided by the Alabama Medicaid Application and Enrollment System (AMAES). CARES provides functionality to support the Recipient Eligibility and Enrollment Business Services of the Agency.
System	Claims Processing and Management Services System	The Claims Processing and Management Services System (CPMS) is a targeted TO BE System that will replace multiple functions currently provided by the Alabama Medicaid Management Information System (AMMIS). CPMS will support Medicaid business functions and processing for areas such as claims, financial management, care management, managed care enrollment, benefit package maintenance, third party liability, recipient management, pharmacy, and prior authorization.
System	Data Governance Tool	Collibra serves as the Agency's Data Governance Tool, administered by the Data Governance Office (DGO). Collibra provides Data Stewards the ability to manage Master Data Management Rules and Record Formats, and report on metrics based on Master Data Management Validation Results.
System	Enterprise Data Services System	Enterprise Data Services (EDS) is a targeted TO BE System. The EDS will integrate, transform, and connect data across the organization and serve as the central repository for the Alabama Medicaid Agency (AMA) to interact with their data. This will allow for the AMA to make informed and timely decisions, as well as provide business intelligence (BI) tools for reporting and advances analytics that will provide operational support and management of the state's healthcare program.
System	Modular Electronic Visit Verification System	The Modular Electronic Visit Verification System (MEVV) is currently in-process of being implemented. Under this model, the Agency will set the processing standards for MEVV, provide a front-end application for capturing Electronic Visit Verification (EVV) visit data, and aggregate EVV visit related data from third-party systems. Providers under this model have the flexibility to use the Agency's MEVV or select a solution that better meets their individual business and technology needs. Should providers select a solution of their own, they shall submit standardized visit-related data as defined by the Agency, to the MEVV.
System	Provider Management System	The Provider Management System is a targeted TO BE System that will provide a modular solution to support the provider management business processes, including provider enrollment/termination, information management, provider communications, and provider web portal.
System	System Integration Services	The System Integration Services Solution is a targeted TO BE system solution that includes a System Integration Platform, Integration of MES Contractor Systems, and Centralized Services.
Technology Service	Centralized Change Management System	Used to coordinate and manage changes of the components in the MES.
Technology Service	Centralized Service Desk Management Tool	A single view into all service requests across the MES.
Technology Service	Data Governance	The process of managing the availability, usability, integrity, and security of the data per guidance supplied by the Alabama Medicaid Agency Data Governance Office (DGO).

Type	Name	Description
Technology Service	Health and Performance Monitoring	The process of monitoring system health and stability and presenting system health metrics for management of the MES.
Technology Service	Identity Management	A solution that creates, modifies, disables, and deletes user accounts and their profiles across the MES.
Technology Service	Managed File Transfer Service	A solution that will reliably and securely exchange electronic data with systems outside the MES.
Technology Service	MES Portal	A login and registration functionality and initial landing page for the MES.
Technology Service	System Integration Platform	Transforms and exchanges data among MES Contractor Systems and integrates the various MES modules into a seamless, functional system.
